

WE BUILD YOUR ELECTRONICS

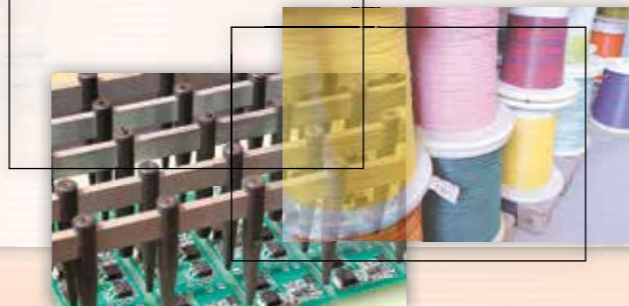

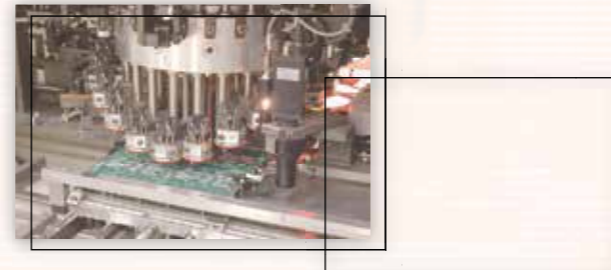

Analysis and design:

Our technicians work closely with the customer, taking care on all details of the development phases: specification, analysis, HW and Sw design and production technology.

All the assembly and soldering process, both with SMD and PTH technology, is performed in our plant with modern pick-and-place machines and specialized technicians.

Test (parametric / functional) and calibration is performed only in house, with automatic and semi-automatic tools and highly specialized technicians.

Test equipments are periodically verified and calibrated.

Servizi Saet - Cablofil

WE BUILD YOUR SYSTEMS

Wiring harnesses production with connections and characteristics according to customer specifications.

Unipolar, multipolar and power cables assembly

All the operations to build the harnesses are performed by trained personnel and automatic machinery, or manually when it's necessary.

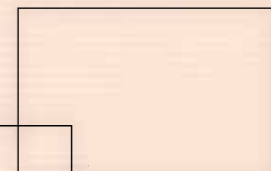

To complete the service, we are able to mark wires and to mould plastic parts on the harness.

WE BUILD YOUR WIRING HARNESSES

Thanks to the joined potentials of Saet and Cablofil we can produce complex systems ready to be started up, offering our customers a unique interlocutor for many solutions.

Our agreements with several suppliers for both electrical and electronic components allow us to be competitive in supplying finished solutions for electrical cabinets, both for control and distribution.

In 1990 the Company faces the customer electronic market, immediately using microcontrollers and microprocessors. Over 20 years of continuous growing brought to SAET experience and know-how to develop high complexity and technology projects.

Dynamic, reliability, short development timings are among our strength characteristics, allowing us to analyze, propose and apply the best technologies for the single application and bringing us as the best partner for home and industrial field.

Our proposal is a complete service, starting from the idea through design to series production, setting the customer free from managing different complex activity, suppliers, materials so much different from his core business items.

Cablofil propose itself both as harness supplier and as a personalized solution supplier. We face all customer requests and all markets with competence, quality and dynamism, using always the most appropriate technologies. Our production can manage very low volume productions (few tenth of pieces) to large volume mass productions. When necessary, our technical office can support customers in choosing the best solution in terms of configuration, technology, components for the single applications and products. Our wide experience, from Automotive to Home appliances, boating etc. allows us to satisfy all markets in the best way. Our mission is to give customers any complex solution in the most costeffective technology.
